

MEASURING INSTRUCTIONS FOR DECKING ROPE

THINGS YOU'LL NEED

- Measuring Tape
- String
- Tape

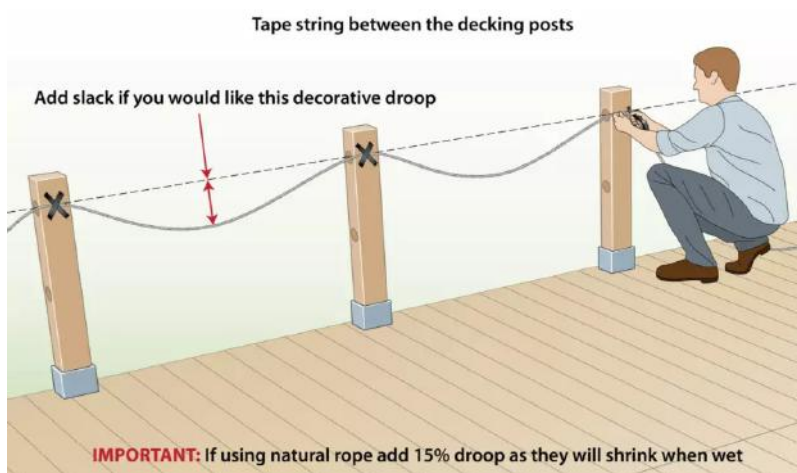

INSTRUCTIONS

Rope Thickness Disclaimer:

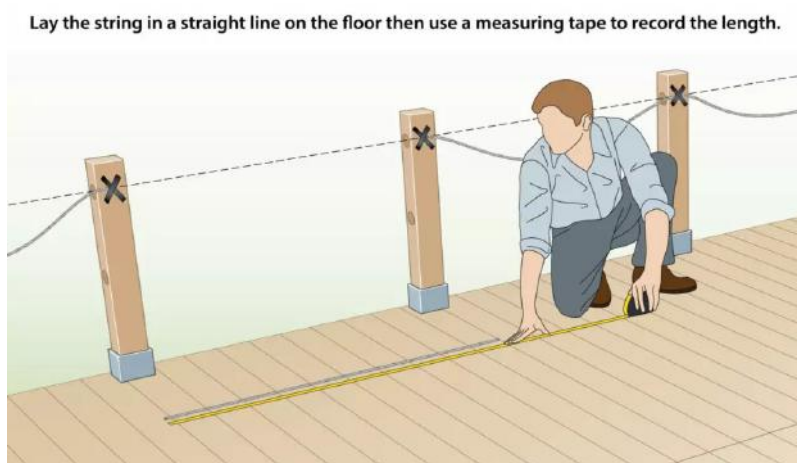

The diameter is always measured under tension so ropes will usually be thicker when relaxed.

Please allow $\pm 4\text{mm}$ for synthetic ropes and $\pm 6\text{mm}$ for natural ones.

We advise waiting for the rope to arrive before choosing a post with pre-drilled holes or before drilling the holes yourself.

Step 1: Tape string between the posts. Add slack if you would like to include a decorative droop.

Step 2: Lay the string on the floor then use a measuring tape to record the length.
